WE GET YOUR COMPUTER SYSTEMS TALKING TO EACH OTHER

People's lives are better when business processes work reliably.
For that, software applications need to connect and share information.
That's Integration, and that's what we do.

TECHNOLOGY

WHAT WE DO

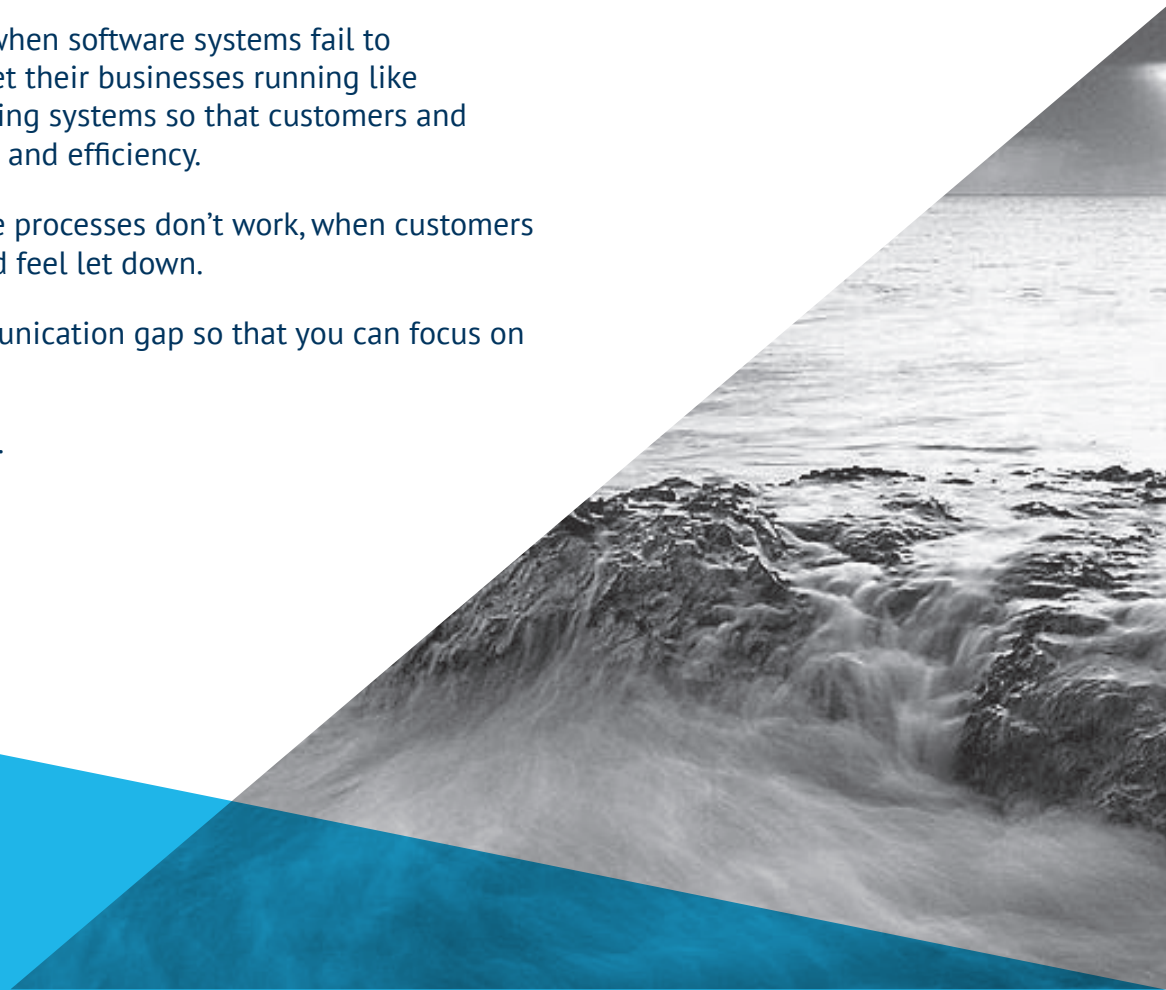
We help get your business running like clockwork

Business processes break down when software systems fail to communicate. We help leaders get their businesses running like clockwork by seamlessly connecting systems so that customers and employees experience reliability and efficiency.

We know how it feels when these processes don't work, when customers and employees are frustrated and feel let down.

Let us help you bridge the communication gap so that you can focus on improving your business.

This is what we call ***"Integration"***.



AUTOMATING YOUR KEY BUSINESS SERVICES

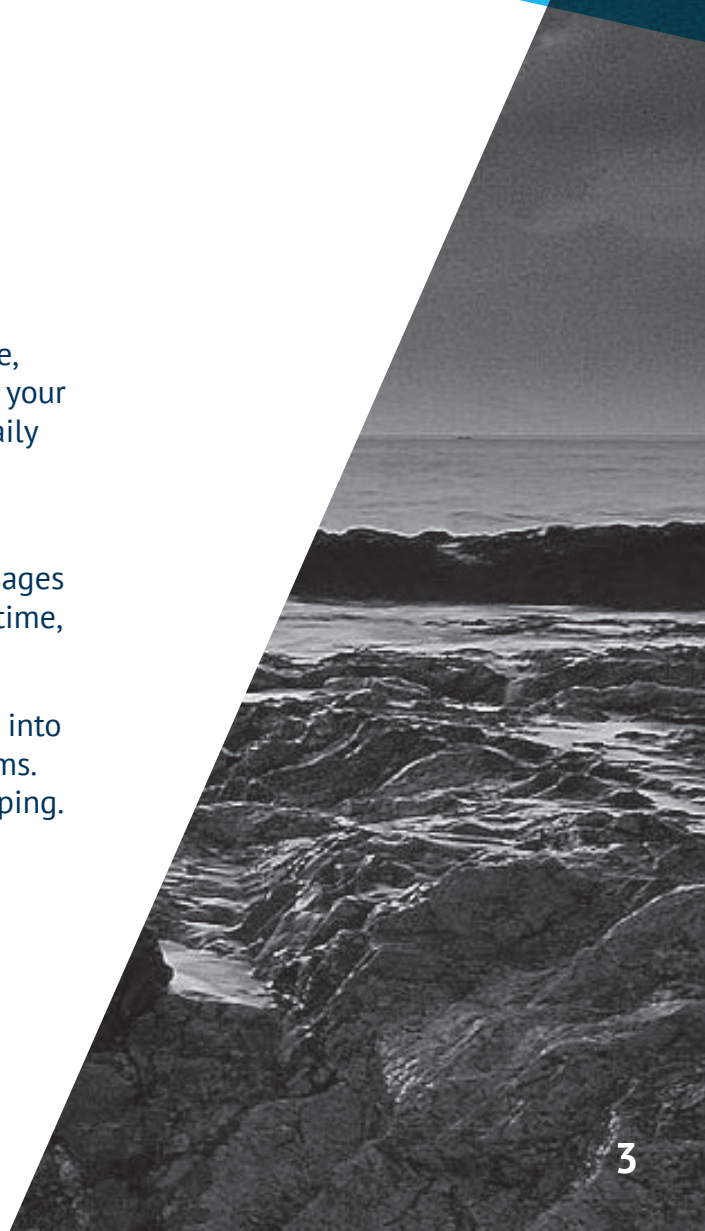
By connecting multiple software applications, we improve the lives of customers and employees

We help employers automate people processes, identifying joiners, movers and leavers and synchronising HR information with Finance, Expenses, Time & Attendance and Access systems. This means that your employees are always able to access the right systems and their daily activities are made easier.

We help banks automate the sending of payments, automating compliance checks and ensuring reliable delivery of payment messages to other banks. This means that people can receive their salary on time, send money to their children and ensure their mortgage is paid.

We help supermarkets make sure that price changes are replicated into their online shop, into every till, click & collect and self-scan systems. This means customers are charged the right amount for their shopping.

We help logistics and retail customers automate their warehouse processes, automating order receipt, stock allocation, goods in and dispatch. This means that stock levels are always accurate and customers get their deliveries promptly and reliably.



TEAM AUGMENTATION

We have the right people for your integration project.

Would you trust your project to unvetted, unknown and untested people? Your project is too important to leave things to chance, and the performance of the people on your team is paramount to success.

Avoid being let down by poor performers – draw on our team of expert engineers backed up by our wider network of verified associates so you get a team you can rely on.

Roles:

- Enterprise Architect
- Solutions Architect
- Integration Architect
- Lead Engineer
- Integration Developer (all levels)
- DevOps Engineer
- Test Lead
- Test Engineer
- Technical Project Manager
- Scrum Master

DEVELOPING YOUR INTEGRATION CAPABILITY

We develop the skills, processes and knowledge of your development teams so you can be self-sufficient.

As with many of our customers, your goal may be to develop the capability of your own development teams so that you can take ownership of your solution in the long-term. It can be daunting taking on a new technology such as Azure Integration Services, but your team will be more motivated and committed when you invest in their future. We work together so you deliver your projects and simultaneously close the skills gap.

We develop your capability by:

- Mentoring your team
- Real-world project experience for your team members
- Classroom-style technical training
- Development practices and processes

LEGACY PLATFORM MIGRATION

We migrate legacy integration technology into the cloud.

Are old integration technologies such as BizTalk, IBM WebSphere and Software AG holding you back just as you want to take your business forwards?

Our 5-stage migration process moves your integration workloads onto a modern Azure cloud platform, lowering your overall costs and removing the headache of obsolete and unsupported technology.

Our migration process:

- **Assessment –** we help you understand the size, scope and risks
- **Proof of Concept –** we quickly verify that the technology platform meets your needs
- **Infrastructure –** we create secure and scalable cloud infrastructure
- **Migration –** we move your workloads onto your new platform
- **Support –** we ensure smooth and reliable operation

AZURE INTEGRATION SUPPORT

We look after your solution once it goes live.

We know how it feels when something goes wrong with your solution, you have people pressuring you for a fix and you need people with the right technical expertise. Imagine your peace of mind knowing you have expert support engineers you can call on who will quickly get things running smoothly again.

Our support includes:

- Rapidly reacting to production issues
- Managing configuration and capacity changes
- Proactive monitoring, alerting and diagnostics
- Keeping your platform evergreen and secure
- Understanding and optimising your cloud costs

345 AIR – YOUR CLOUD INTEGRATION PLATFORM

Rapid integration infrastructure that helps you deliver business improvements faster

You should be spending your project budget on features that improve your business instead of creating cloud infrastructure. 345 AIR is a secure, scalable and reliable cloud integration platform based on Azure Integration Services that gives you low and predictable implementation and running costs.

With typically 2 weeks' planning and 2 weeks' implementation, your development teams can have the secure platform that hosts their solutions so you can be delivering value faster.

Customers also come to us to help solve their infrastructure problems such as performance and scalability, security and compliance, reliability, cloud cost optimisation, disaster recovery and business continuity.

FRACTIONAL ADVICE

Expert strategic guidance for a fraction of the cost of an internal hire.

It's not practical for you to hire an expert in every technology and for every business problem. It's good when you can call on that expertise when you need it, and our fractional advice means you get the best of both worlds and a competitive price point.

We help you create and drive your technology roadmap, understanding and shaping how technology will improve your business and creating the core blueprints that your own teams can build on.

The fractional roles we provide include:

- Fractional CTO
- Fractional Enterprise Architect
- Fractional Solutions Architect

WHO WE WORK WITH

It's not about technology, it's about understanding your business and its processes.

It's great when you find someone who really understands the challenges you are facing and what you want to achieve. It's highly likely that your problem is similar to something we have done before.

OUR EXPERIENCE INCLUDES:

- **Retail & Supermarkets**
- **Banking & Insurance**
- **Manufacturing & FMCG**
- **Energy & Renewables**
- **Public Sector**

ABOUT US

345 Technology has been creating software solutions that improve the lives of your customers and employees since 2019. We are based in Winchester, Hampshire, and serve customers throughout the UK and beyond.

We are highly values-driven with a passion for technology and a mission to serve customers. We have a strong permanent team of experienced engineers supplemented by a network of onshore and offshore partners that means we have the depth of expertise and the scale to deliver for you.

OUR VALUES

INTEGRITY

Always acting ethically and transparently

DISCIPLINE

Focused on consistently delivering results

IMPACT

Making great things happen for our customers

INNOVATION

Driving improvement through new ideas and technology

SERVICE

Prioritising the needs of customers and exceeding expectations
